Question: Short Program

According to the TP Handbook 2011-2012, “The feature for the flying entry can be granted only if the basic position is reached within the first two (2) revolutions after the landing”. What will be the consequence of “A basic position not reached within the first 2 revolutions after landing” in the Flying Spin of the Short Program?

Answer:

The Level of this Flying Spin is not higher than 1 (to be in line with a similar problem in this spin “Position not attained in the air”).
